

OPUDA'S PAINT

# Colour Book

*59 colours · nine families · 2026*

Fifty-nine colours, nine families, nine palettes —
and the reasoning behind each one.

OPUDA'S PAINT · PORT HARCOURT · NIGERIA

OPUDA'S PAINT

# Colour mixed in Port Harcourt.

We mix, we supply and we specify. The colour on a wall should be a decision you can defend — not a lucky guess under a shop light. This book exists to make that decision smaller.

Set in Instrument Serif and Archivo, both under the SIL Open Font License. Colours, codes, LRVs and product figures are generated from the data that serves opudapaint.com, so print and screen cannot disagree.

# Contents

The book runs light to deep. Each family opens with the idea behind it and follows with the range, so a chapter can be read in the shop or handed across a counter.

| | | |

Port Harcourt

*Nine families, and the rooms each one is for.*

# How to read this book

Each colour carries four pieces of information. Together they are enough to choose with, and to argue with a painter about.

### THE CODE

Permanent. Printed under every name and quoted when you order. A name may be revised; the code never changes, because it is what the mixing system, the dealer and your own record all point at.

### THE FAMILY

The neighbourhood the colour lives in. Choosing a family first is the single biggest shortcut in this book: rooms fail when two colours from different temperatures are put next to each other without a decision.

### THE UNDERTONE

Warm, cool or neutral — what the colour does beside its neighbours. Two greys can carry the same lightness and behave completely differently; the undertone is the difference.

### THE LRV

Light reflectance value, 0 to 100. The higher the number, the more light the surface gives back. Below 30 a room needs more light than it did before; above 75 the wall starts to work as a reflector. Ours is estimated from the digital value, not measured from a dried film — treat it as a guide, and read it with a squint.

### WHAT THIS BOOK CANNOT DO

A printer cannot reproduce a paint film, and neither can a screen. Colour depends on lighting, the substrate, the finish and the way it was applied — the same colour on ceiling plaster and on a rendered wall is two different experiences. Everything here is a printed approximation of a digital value. Confirm every choice against a physical chip or a sample pot before you buy paint. LRV figures are calculated from the digital value; they are not spectrophotometer readings of dried film.

# Colour has a job to do

Most paint decisions are made in a shop, under a fluorescent tube, from a chip the size of a postage stamp. Then the colour goes onto a wall four metres wide, in a room that faces west, and everything the chip promised changes.

> *A white is never neutral. It carries a temperature, and the temperature decides the room.*

This book exists to shorten that distance. Every colour in it carries a code you can quote at a counter, a family it belongs to, an undertone that tells you what it will do next to other colours, and an estimated light reflectance value that tells you how much of the light in the room it will give back.

None of that replaces standing in the room with a sample pot. What it does is make the decision smaller. Choose the family first, then the palette, then the exact colour — in that order, the choice usually makes itself.

Every figure in this book is generated from the same data the website serves. Nothing here is transcribed by hand.

# Light, with an opinion

*Seven whites, no two the same temperature*

A white is never neutral: every one carries a temperature, and that temperature decides whether a room reads warm or clinical. Ranging from a clean, cool white that holds its own beside steel and tile to an ivory warmed by late sun, these are the colours that do the quiet structural work of a house — ceilings, cornices, and the rooms you will repaint last.

01

**RECOMMENDED AREAS**

Ceilings and cornices · A whole-house base · Kitchens and bathrooms · Trim against stronger colour

**ON THE WALL**

Take the ceiling one step lighter than the wall. The same white on both reads flat; two whites read as depth.

**PAIRS WITH WARM NEUTRAL**

# The range

07 COLOURS · LRV 72–91

**Opuda White**
OP-001 · LRV 91 · Neutral
#F8F5EE

OP-008 · LRV 78 · Warm
#EBE4D5

**Bone**
OP-010 · LRV 74 · Warm
#E6DFCF

**Cotton Paper**
OP-016 · LRV 72 · Neutral
#E2DCD0

Take the ceiling one step lighter than the wall. The same white on both reads flat; two whites read as depth. Pairs with Warm Neutral.

# The quiet ground

*Sand, clay and taupe, a step lighter than you think*

Neutrals do the hardest job in a house: they let the furniture, the art and the people be the subject. In this light the mistake is almost always the same — a neutral chosen to match the floor exactly, which leaves the room looking unfinished. Ours are pitched a step lighter, so they carry the daylight without turning grey.

02

**RECOMMENDED AREAS**

Living rooms and bedrooms · Exterior render · Hallways and stairwells · Bands and dado rails

**ON THE WALL**

Never match the floor. Move a step lighter or darker than the timber and the room separates itself.

**PAIRS WITH GREEN**

# The range

09 COLOURS · LRV 21–59

**Savannah Sand**
OP-104 · LRV 59 · Warm
#DBC7A6

OP-112 · LRV 43 · Warm
#C6AA88

**Pebble**
OP-132 · LRV 38 · Neutral
#A8A69C

**Mushroom**
OP-120 · LRV 32 · Neutral
#A69788

**Taupe Drift**
OP-124 · LRV 29 · Warm
#A3917C

**Bronze Dust**
OP-128 · LRV 21 · Warm
#8F7A62

Never match the floor. Move a step lighter or darker than the timber and the room separates itself. Pairs with Green.

# Structure without drama

*The family that makes other colours look deliberate*

Grey is the most useful colour in this book and the easiest to get wrong. Warm greys sit comfortably beside clay and timber; cool greys give a room precision but turn muddy next to a warm neutral. On joinery, piers and doors, grey is what makes a coloured wall look chosen rather than accidental.

03

**RECOMMENDED AREAS**

Joinery, doors and frames · Exterior piers and plinths · Studies and home offices · A quiet feature wall

**ON THE WALL**

Test a grey against the colour it will sit beside, never on its own. A cool grey next to a warm neutral drags both towards green.

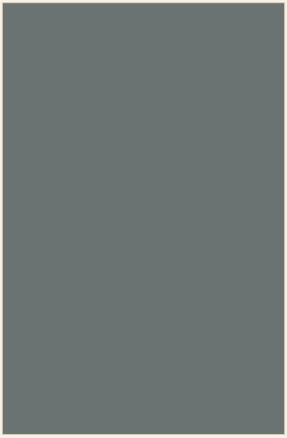

**PAIRS WITH BLUE**

# The range

05 COLOURS · LRV 1–61

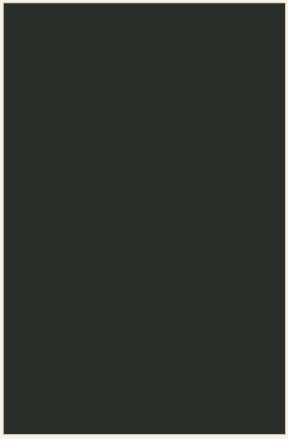

**Morning Mist**
OP-709 · LRV 61 · Cool
#CACFCB

**Slate Grey**
OP-705 · LRV 17 · Cool
#6A7371

**Graphite**
OP-701 · LRV 5 · Neutral
#3A3F3C

**Charcoal Wall**
OP-713 · LRV 3 · Neutral
#2A2E2B

**Window Black**
OP-717 · LRV 1 · Neutral
#1B1D1C

Test a grey against the colour it will sit beside, never on its own. A cool grey next to a warm neutral drags both towards green. Pairs with Blue.

# The borrowed landscape

*Eight greens that behave like neutrals*

A well-chosen green brings the garden inside without asking permission, and in a climate this green that is a real advantage. These run from a deep forest that holds a library together to a misted eucalyptus for rooms that never get direct sun. Green is also the most forgiving family under artificial light: it rarely shifts.

04

**RECOMMENDED AREAS**

Lower walls and dados · Studies and libraries · Garden rooms and verandas · Exterior metalwork and gates

**ON THE WALL**

Green reads darker on four walls than it does as a chip. On a north-facing wall, take one step lighter than the sample suggests.

**PAIRS WITH WARM NEUTRAL**

# The range

08 COLOURS · LRV 6–66

**Eucalyptus Mist**
OP-229 · LRV 66 · Cool
#CED7C8

**Sage Whisper**
OP-225 · LRV 51 · Warm
#B9C1A7

**Olive Branch**
OP-221 · LRV 20 · Warm
#7D7F4E

#0C6B45

**Palm Shadow**
OP-209 · LRV 9 · Cool
#3E5C46

**Forest Floor**
OP-205 · LRV 6 · Cool
#2B4A37

Green reads darker on four walls than it does as a chip. On a north-facing wall, take one step lighter than the sample suggests. Pairs with Warm Neutral.

# Cool that behaves

*From a lagoon at noon to a midnight*

Blue is the family most affected by the light it lives in. A deep blue reads almost black by lamplight and opens up completely in daylight, which makes it the most dramatic choice here — and the one that rewards a proper primer. The pale end is calmer: powder and harmattan sky keep a hot room from feeling hotter.

05

**RECOMMENDED AREAS**

A dramatic feature wall · Bedrooms · Exterior fences and boundary walls · Bathrooms and wet rooms

**ON THE WALL**

A deep blue over a light wall is three coats, not two. Tint the primer towards the topcoat and the third coat becomes optional.

**PAIRS WITH WHITE & OFF-WHITE**

# The range

07 COLOURS · LRV 3–63

**Powder Blue**
OP-313 · LRV 63 · Cool
#C2D2DD

**Harmattan Sky**
OP-309 · LRV 49 · Cool
#A7BECD

**Blue Fence**
OP-325 · LRV 19 · Cool
#2F7FA8

**Denim Room**
OP-317 · LRV 15 · Cool
#566F8A

**Lagoon**
OP-305 · LRV 13 · Cool
#2C6E85

**Atlantic Blue**
OP-301 · LRV 7 · Cool
#1E4E6B

**Indigo Night**
OP-321 · LRV 3 · Cool
#263050

A deep blue over a light wall is three coats, not two. Tint the primer towards the topcoat and the third coat becomes optional. Pairs with White & Off-White.

# The colour that changes its mind

*Lilac, plum and the shades between*

Purple is the family that surprises people, and it is worth knowing why: mauve and lilac carry so little colour of their own that whatever sits underneath shows through. Over a warm white primer a lilac drifts peach; over a grey one it goes cool. Prime the whole wall, not just the patches, and what you chose is what you get.

06

**RECOMMENDED AREAS**

Bedrooms · Alcoves and reveals · Lounges · Children's rooms

**ON THE WALL**

Prime the entire wall in one tint. Patch-priming is why two rooms painted the same colour come out different.

**PAIRS WITH GREY**

# The range

06 COLOURS · LRV 4–62

**Blush Room**
OP-621 · LRV 62 · Warm
#E6C8C0

**Lilac Room**
OP-605 · LRV 56 · Cool
#D1BFD5

**Mauve Linen**
OP-613 · LRV 41 · Neutral
#C2A5AD

**Dusty Grape**
OP-617 · LRV 18 · Cool
#8C6D85

**Plum Velvet**
OP-609 · LRV 9 · Cool
#6B3FA3

**Aubergine**
OP-601 · LRV 4 · Cool
#4A2B45

Prime the entire wall in one tint. Patch-priming is why two rooms painted the same colour come out different. Pairs with Grey.

# Warmth with weight

*Brick, clay and the strongest accent in the book*

Red advances. On a wall it shortens the distance between you and the surface, which is why it works so well in a dining room and so badly down a narrow corridor. The terracotta end is the practical half of the family: warm, earthy, and forgiving of the dust and sun that anything exterior will meet.

07

**RECOMMENDED AREAS**

Feature and dining walls · Exterior plinths and boundary walls · Gates and ironwork · Alcoves and reveals

**ON THE WALL**

Reds show a lap mark more than any other colour. Keep a wet edge, roll in one direction, and never stop in the middle of a wall.

**PAIRS WITH WARM NEUTRAL**

# The range

07 COLOURS · LRV 9–33

**Coral Dust**
OP-413 · LRV 33 · Warm
#D08B72

**Terracotta**
OP-401 · LRV 20 · Warm
#B4654A

**Clay Pot**
OP-405 · LRV 15 · Warm
#A9553C

**Festival Red**
OP-421 · LRV 12 · Warm
#C1121F

**Brick Lane**
OP-409 · LRV 10 · Warm
#8C4533

**Rust Ember**
OP-425 · LRV 10 · Warm
#8A4A2B

**Crimson Seal**
OP-417 · LRV 9 · Warm
#A8101B

Reds show a lap mark more than any other colour. Keep a wet edge, roll in one direction, and never stop in the middle of a wall. Pairs with Warm Neutral.

# Light you can paint

*The only family that adds daylight to a room*

Yellow lifts a space without a window, which makes it useful in corridors, stairwells and kitchens that face away from the sun. It is also the least forgiving family on a poor surface: colour this saturated shows every ripple in the plaster, so fill, sand and prime before committing a whole wall to it.

08

**RECOMMENDED AREAS**

Kitchens · Corridors and stairwells · Exterior accents and trim · Ceilings in dark rooms

**ON THE WALL**

Inspect the wall under a raking light before you paint. If you can see it unlit, yellow will show it twice.

**PAIRS WITH WHITE & OFF-WHITE**

# The range

05 COLOURS · LRV 30–59

**Apricot Wall**
OP-517 · LRV 59 · Warm
#E8C3A1

**Harmattan Sun**
OP-501 · LRV 50 · Warm
#E3B45F

**Golden Hour**
OP-509 · LRV 47 · Warm
#DAAF69

**Marigold**
OP-513 · LRV 41 · Warm
#DF9F2A

**Ochre**
OP-505 · LRV 30 · Warm
#C58A3C

Inspect the wall under a raking light before you paint. If you can see it unlit, yellow will show it twice. Pairs with White & Off-White.

# Rooms that hold you

*Colours that shrink a space, on purpose*

The deepest colours here are not for every room, but nothing else does what they do: a dark room, painted properly, feels deliberate and quiet rather than small. On doors, frames and joinery against a pale wall they cost almost nothing and change everything. Deep colour is judged by its edges, so the preparation matters more than the coat.

09

**RECOMMENDED AREAS**

Feature walls and studies · Doors, frames and joinery · Exterior joinery · Ceilings in tall rooms

**ON THE WALL**

Brush the last coat on a textured wall rather than rolling it: a roller leaves a stipple you will see in every raking light.

**PAIRS WITH WHITE & OFF-WHITE**

# The range

05 COLOURS · LRV 3–18

**Bronze Patina**
OP-817 · LRV 18 · Warm
#6D7A62

**Cocoa Brown**
OP-809 · LRV 5 · Warm
#593A2B

**Deep Ocean**
OP-805 · LRV 4 · Cool
#1B3A50

**Midnight Teal**
OP-801 · LRV 3 · Cool
#14332F

**Espresso**
OP-813 · LRV 3 · Warm
#3A2A22

Brush the last coat on a textured wall rather than rolling it: a roller leaves a stipple you will see in every raking light. Pairs with White & Off-White.

# Palettes

1 OF 3

## Bonny Evening

THE DELTA EDIT

| OP-301 | OP-010 | OP-001 | OP-509 |
|---|---|---|---|
| **Feature wall** | **Main walls** | **Ceilings & trim** | **Accent** |

A river-facing living room at dusk: deep Atlantic on the wall behind the seating, bone on the remaining walls so the room still reads as light, and a single golden accent on the joinery.

*Best for living rooms with west-facing glazing.*

## Harmattan Haze

HARMATTAN

| OP-104 | OP-112 | OP-813 | OP-001 |
|---|---|---|---|
| **Main walls** | **Lower band** | **Trim & doors** | **Ceilings** |

The whole palette of December: dust-warm sand on the walls, a deeper clay dado, espresso on the doors and pure white ceilings to keep the light bouncing.

*Best for open-plan interiors with timber furniture.*

## Lilac Lounge

THE DELTA EDIT

| OP-605 | OP-617 | OP-001 | OP-132 |
|---|---|---|---|
| **Main walls** | **Feature alcove** | **Ceilings & cornice** | **Floor tone reference** |

Taken directly from a finished OPUDA'S job in GRA Phase 2, Port Harcourt: lilac across the main walls, a deeper grape in the recessed alcove, and white cornices doing the structural work.

*Best for bedrooms and small lounges.*

# Palettes

2 OF 3

## Peach Corridor

HARMATTAN

| OP-517 | OP-413 | OP-004 | OP-613 |
|---|---|---|---|
| **Corridor walls** | **Recess** | **Ceilings** | **Adjoining room** |

A warm corridor that borrows light from the room beyond it — apricot on the long walls, coral in the deep recess, and a mauve transition room you glimpse at the end.

*Best for corridors, stairwells and circulation with no daylight.*

## Rain Season

RAIN SEASON

| OP-209 | OP-225 | OP-010 | OP-817 |
|---|---|---|---|
| **Lower walls** | **Upper walls** | **Ceilings** | **External joinery** |

A green that behaves like a neutral. Palm Shadow anchors the lower wall, Sage Whisper lifts the upper wall, and Bronze Patina ties the exterior metalwork to the garden.

*Best for rooms with a garden view, studies and libraries.*

## Plum Study

THE SIGNATURE

| OP-609 | OP-601 | OP-120 | OP-001 |
|---|---|---|---|
| **Feature wall** | **Returns & reveals** | **Adjoining walls** | **Ceilings & trim** |

A study built for evening use: saturated plum on the wall you face, aubergine in the reveals so the colour continues when the door is open, and mushroom elsewhere to keep it calm.

*Best for studies, media rooms and libraries.*

Roles run left to right.

# Palettes

3 OF 3

## Terracotta Court

HARMATTAN

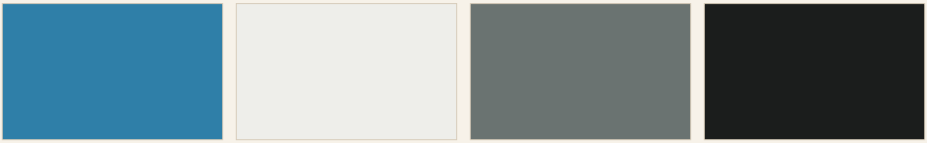

| OP-401 | OP-008 | OP-409 | OP-717 |
|---|---|---|---|
| **Main facade** | **Render and trims** | **Plinth band** | **Frames & gates** |

A courtyard elevation that has to work in strong sun: terracotta body, limestone bands to stop it overheating, a brick-red plinth, and black frames for crispness.

*Best for facades, boundary walls and gatehouses.*

## Blue Fence

THE DELTA EDIT

| OP-325 | OP-020 | OP-705 | OP-717 |
|---|---|---|---|
| **Boundary wall** | **Facade** | **Piers** | **Fence & gate** |

The turquoise boundary wall seen on an estate in Rumuola, paired with stone-white render and black steel so the blue reads as a deliberate architectural decision rather than a whim.

*Best for exteriors and boundary walls.*

## Quiet Luxury

THE SIGNATURE

| OP-120 | OP-124 | OP-128 | OP-012 |
|---|---|---|---|
| **Main walls** | **Feature** | **Trim detail** | **Ceilings** |

Four neutrals and no colour, relying entirely on depth and reflectivity. This is the palette specifiers come back to when a client says "nothing too strong".

*Best for speculative developments and rentals.*

Roles run left to right.

# On the wall

Three jobs on this page, and the palette specified for each. Every photograph is a site we painted; the colours listed under a caption are the ones the job record specifies, which is a narrower claim than the one the picture makes.

**The arched villa**
GRA Phase 2, Port Harcourt · 2025
specified: OP-010 · OP-132 · OP-409 · OP-701 · OP-001

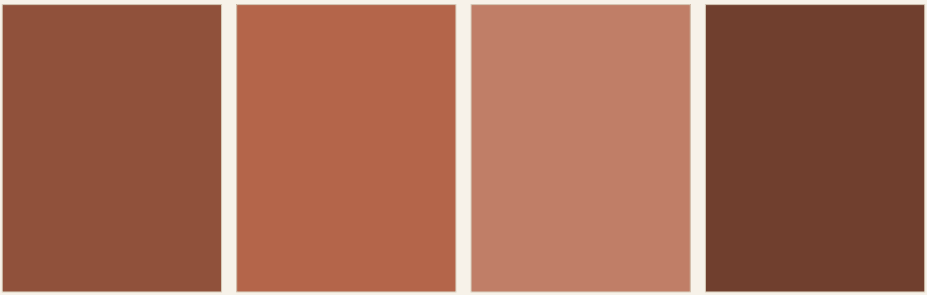

**The lilac lounge**
GRA Phase 2, Port Harcourt · 2024

**Creek-facing facade**
Woji, Port Harcourt · 2025

# One colour, four lights

The same wall, from a rainy morning to a lamp at ten at night. The paint does not change; the light does, and with it the temperature you read. This is why a colour chosen at noon can feel wrong at dinner — and why the largest surfaces in a room deserve a colour you have seen at your worst hour of light, not your best.

**Rain, 7am**
#90513B
Cool and flat. Everything loses saturation.

**Harmattan noon**
#B4654A
The reference. Judge the swatch here.

**Late afternoon**
#C07E67
Warmth arrives; undertone becomes visible.

**Lamp, 9pm**
#703F2E
Deepens fast. Pale colours warm, deep colours close.

### WORKED EXAMPLE · TERRACOTTA OP-401

This is a demonstration of value, not a photograph: each panel is the same colour moved lighter or darker, which is what the eye does when the light changes. The order is what matters. A colour that only works in the noon panel will disappoint in the evening one.

Ask which way the room faces before you choose. East and west rooms change through the day and need a colour that survives both ends. A north-facing room is the coolest and needs the warmest step in the family. A south wall takes the steadiest light and can carry the strongest colour.

# Specification

How much paint, which system, and in what order. Figures are per litre of a single coat on a sound, sealed surface; a porous or unpainted wall will always take more. Your dealer can turn a wall area into a pack list.

| PRODUCT | FINISH | COVERAGE | PACKS |
|---|---|---|---|
| **MATT Emulsion** | Matt (flat), sheen < 5% | 11 m² per litre | 1L/4L/10L/20L |
| **SILK Emulsion** | Silk (soft sheen), 10-15% | 12 m² per litre | 1L/4L/10L/20L |
| **Alkali-Resisting Primer** | Primer (sealing coat) | 10 m² per litre | 4L/20L |
| **Synthetic Gloss** | Gloss, sheen 80%+ | 13 m² per litre | 1L/4L/20L |
| **Weathershield** | Textured exterior coating | 6 m² per litre | 10L/20L |
| **Screeding Compound** | Filler / base coat | 1.6 m² per kg at 1 mm thickness | 10kg/25kg |

### WHERE EACH PRODUCT GOES

| | |
|---|---|
| **Interior walls** | MATT · SILK · Alkali-Resisting Primer · Weathershield · Screeding Compound |
| **Ceilings** | MATT · Screeding Compound |
| **Kitchens & bathrooms** | SILK |
| **Exterior walls** | Alkali-Resisting Primer · Weathershield |
| **Timber & metal** | Synthetic Gloss |
| **New plaster & blockwork** | Alkali-Resisting Primer · Screeding Compound |

### HOW MUCH PAINT

**Wall area ÷ coverage × coats = litres**

A 4 m × 3 m wall is 12 m². Two coats of a product covering 11 m² per litre is 12 ÷ 11 × 2 = 2.2 litres, so a 4 L pack, with enough left over to cut in. Subtract doors and windows; add ten per cent for a porous or unpainted wall.

# Where to start

*01*

**Choose a family**

Start with the chapter that matches the room's job, not with a colour you liked somewhere else. Every family chapter lists the rooms it suits.

*02*

**Take a sample pot**

Paint a 500 mm square on the actual wall — two coats, right to the edge — and live with it for a day. Look at it at night with the lamps on.

*03*

**Quote the code**

OP-401, not "the terracotta one". The code is what the mixing system, the dealer and this book all agree on.

*04*

**Size the job**

Measure the wall area, subtract the openings, and take the coverage figure from the specification page. Two coats, every time.

---

*The colour on the wall is the last decision, not the first. Get the family right and the rest is arithmetic.*
